RISK ANALYSIS – SWOT & RMMM

Risk Management Framework- Risks And Mitigation ...

Response	Strategy	Examples
Avoid	Risk avoidance is a strategy where the project team takes action to remove the threat of the risk or protect from the impact	<ul style="list-style-type: none">• Extending the schedule• Reducing/removing scope• Change the execution strategy
Transfer	Risk transference involves shifting or transferring the risk threat and impact to a third party. Rather transfer the responsibility and ownership	<ul style="list-style-type: none">• Purchasing insurance• Performance bonds• Warranties• Contract issuance (lump sum)
Mitigate	Risk mitigation is a strategy where by the project team takes an action to reduce the probability of the risk occurring. This does not risk or potential impact, but rather reduces the likelihood of it becoming real.	<ul style="list-style-type: none">• Increasing testing• Changing suppliers to a more stable one• Reducing process complexity
Accept	Risk acceptance means the team acknowledges the risk and its potential impact, but decides not to take any preemptive action to prevent it. It is dealt with only if it occurs.	<ul style="list-style-type: none">• Contingency reserve budgets• Management schedule float• Event contingency
